

KANGAROO ISLAND COUNCIL

APPLICATION FOR PERMISSION TO UNDERTAKE REVEGETATION ON A ROAD RESERVE

The *Kangaroo Island Council Roadside Vegetation Management Plan 2007* details conditions for revegetation of road reserves. The relevant section of the plan is attached for your information.

Applicant:

Name:

Telephone: Fax:

Postal Address:

.....
.....

Revegetation location:

Road Name:

Location (attach a sketch if required):

.....

List the species to be planted and the location the seed was collected (attached further list if required)-

Species	Location Collected	Naturally Occurring

For what period do you wish to undertake the revegetation works?

Start Date:/...../..... End Date:/...../.....

Do you have \$10,000,000 Public Liability Insurance? Yes No

If not Council will register you as a "volunteer" to undertake this activity only

Signature of Applicant: **Date:**

Return Form to:

Officer:

KANGAROO ISLAND ROADSIDE VEGETATION MANAGEMENT PLAN 2007

5.20 REVEGETATION

Council will provide permission to plant locally indigenous species on road reserves upon written application. Particular attention will be given to the planting of threatened species and planting following weed management programs (see section 5.11). On Category A and B roads native vegetation should normally be maintained or enhanced through the process of natural regeneration however revegetation will be supported if the DEH Threatened Plant Species Project Officer is consulted.

Council officers will provide permission to undertake revegetation planting on road reserves for a period at their discretion but will generally be for the duration of the planting period.

Appendix 6 provides a copy of the application form to undertake revegetation on road reserves.

Objective: *Revegetation on road reserves to complement the biodiversity of the road reserves with the intent to mimic pre European vegetation communities previously present in the area*

Actions:

- Only local indigenous species to be planted on road reserves
- Applicants must identify where the species seed was collected from and provide copies of the appropriate permissions to obtain this material
- *Phytophthora* hygiene practices must be undertaken at all times
- Public liability insurance of \$10M is required or become a registered volunteer with Council
- All people undertaking revegetation on road reserves must be aware of and use appropriate traffic management techniques and appropriate signage installed
- Areas where revegetation occurs are to be signed at each end and at 500m intervals with the standard sign as per Figure 7. Height to be 600mm and the size 450mm x 450mm available from D'Neefe Signs.
- Council Officers will ensure permission is sought from Council to undertake revegetation on road reserves.
- All seed or plants used for replanting the revegetation land should be from seed collected from naturally occurring areas of native vegetation from areas of similar soil type, slope and aspect as close as practicable to the revegetation land ie preferably within 10km from the revegetation land
